### **Assignment 4 – Word Blast**

#### **Description:**

This program counts all the words that contain 6 or more characters. We will use Linux file functions, like open, close, read, lseek.

#### **Approach:**

The approach I used towards this assignment was to refer heavily to the text, specifically part 4 and 5. I was often stuck and had to ask for a lot of help in the discord. I tried watching Youtube videos, but that didn't end up being of any help either. The text along with online resources was my main source of aid in approaching this project.

#### **Issues:**

The majority of my issues were found in finding ways to get started. I didn't know how to begin the project and had to ask for help from peers. Once I got the organization down and an idea of how I wanted to go about completing the project, the text was my next best bet towards moving forward.
